"corrupt practice" means the offering, giving, receiving, or soliciting of anything of value to influence the action of a public official in the procurement process or in contract execution
"fraudulent practice" means a misrepresentation of facts in order to influence a procurement process or the execution of a contract to the detriment of the Borrower, and includes collusive practice among Bidders (prior to or after bid submission) designed to establish bid prices at artificial non-competitive levels and to deprive the Purchaser of the benefits of free and open competition.

2. In the event of termination of the Agreement in whole or in part, the Director (P&IC) may procure, upon such terms and in such manner as it deems appropriate, Goods or Services similar to those undelivered, and the Supplier shall be liable to the Purchaser for any excess cost for such similar Goods or Services. However, the Supplier shall continue performance of the Agreement to the extent not terminated.
3. Notwithstanding, the Supplier shall not be liable for forfeiture of its performance security, liquidated damages, or termination for default if and to the extent that its delay in performance or other failure to perform its obligations under the Agreement is the result of an event of Force Majeure.

For purposes of this clause, "Force Majeure" means an event beyond the control of the firm and not involving the firm's fault or negligence and not foreseeable. Such events may include, but are not restricted to, acts of the client in its sovereign capacity, wars or revolutions, fires, floods, epidemics, quarantine restrictions, and freight embargoes.

O. Termination for Insolvency

The Director (P&IC) may at any time terminate the Agreement by giving written notice to the firm if the Supplier becomes bankrupt or otherwise insolvent. In this event, termination will be without compensation to the firm, provided that such termination will not prejudice or affect any right of action or remedy which has accrued or will accrue thereafter to the Director (P&IC).

P. Termination for Convenience

The Director (P&IC) by written notice sent to the firm may terminate the Agreement, in whole or in part, at any time for its convenience. The notice of termination shall specify that termination is for the client's convenience, the extent to which performance of the firm under the Agreement is terminated, and the date upon which such termination becomes effective.

The Goods that are complete and ready for shipment within thirty (30) days after the firm's receipt of notice of termination shall be accepted by the client at the Agreement terms and prices. For the remaining Goods, the Director (P&IC) may elect:

- (a) to have any portion completed and delivered at the Agreement terms and prices; and/or
- (b) to cancel the remainder and pay to the firm an agreed amount for partially completed Goods and Services and for materials and parts previously procured by the firm.

Q. Arbitration:

- i. If any dispute or difference arises between the parties (firm and the client) in execution of the Agreement, the parties shall make every endeavor to resolve the dispute or difference amicably. If the dispute or difference is not resolved either of the party may see arbitration.
- ii. If the firm intends to go for arbitration, he shall have to give 30 days' notice in writing informing the Director (P&IC) of his intention to refer to the points of differences or dispute

P001S1	Novel Juice fluorescent Nuclear Staining Dyes(with 6X Loading Buffer)	1ml		Novel Juice is a non-mutagenic fluorescent reagent that produces instant visualization of DNA bands upon Blue Light or UV illumination of agarose gels. Novel Juice is used to prepare DNA markers and samples for loading on agarose or polyacrylamide gels. Novel Juice is a very sensitive stain available for detecting the double-stranded DNA (dsDNA). It contains three tracking dyes (Bromophenol Blue, Xylene Cyanol FF, and Orange G) for visually tracking the DNA migration during the electrophoresis process. It is ideal for the environment requiring a safe, non-hazardous alternative to Ethidium Bromide. Approximate fluorescence excitation/emission maxima: 300, 495/537 nm, bound to nucleic acid.	84075

It can be directly added to the lysis products of tissue or cell, which can effectively inhibit the dephosphorylation of phosphorylated proteins, so as to maintain the phosphorylation state of proteins. It is suitable for the detection of phosphorylation protein and protein kinase activity by western blot and immunoprecipitation.	60534

P6730	Protease inhibitor cocktail(100xPIC)	1ml		The Protease Inhibitor Cocktail, EDTA-Free(100x) is mainly composed of Leupetin, Pepstatin A, Aprotinin, E-64, etc. This cocktail inhibits most protease activities, including serine proteases, cysteine proteases, pepsin, trypsin, papain, etc. The protease inhibitor mixture is a 100x concentrated DMSO solution, which is suitable for extracting proteins from mammalian tissues and cells, and the target protein can be obtained more effectively. The extracted protein can be used in WB, Co-IP, etc.	49324

PC1110	Hot Start Taq DNA Polymerase	500U		It is often used to amplify no more than 6 kb fragments such as PCR, DNA marker, primer extension, sequence determination, flat end plus A. The product can be used for TA-Vector cloning directly.	60534
PC1120	Taq PCR MasterMix,2× (with Bromophenol Blue)	1ml*5		It can be used in routine PCR reaction and especially when the target DNA has high GC content or complicated structures.	31388
PC1150	Taq PCR MasterMix,2× (w/o Bromophenol Blue)	1ml*5		It can be used in routine PCR reaction and especially when the target DNA has high GC content or complicated structures.	31388
PC1220	Taq Plus PCR MasterMix,2× (with Bromophenol Blue)	5ml		It can be used in routine PCR reaction and especially when the target DNA has high GC content or complicated structures.	53808

PC1300	Pfu DNA Polymerase	10KU		Pfu DNA Polymerase is a specialized thermostable enzyme expressed in the E. coli with recombinant DNA of Pyrococcus furiosus DNA Polymerase. This protein shows no detectable levels of contaminating endonucleases or exonucleases by SDS-PAGE. It has 3'→5'exonucleases, that corrects error correction is thought to be associated with its intrinsic exonuclease activity. The error rate for Pfu is reported to be 7- to 10-fold lower than of nonproofreading Taq DNA polymerase, and 2- to 30-fold lower than other proofreading enzymes. It has an extension rate of 0.5-1kb/min in a PCR. Due to the high fidelity of pfu DNA polymerase, it has been widely used in molecular biological research and clinical diagnosis, such as real-time PCR, DNA sequencing, gene amplification and mutagenesis.	300428

T1051	TBE Buffer,10x	500ml		TBE buffer is a commonly used nucleic acid electrophoresis buffer solution, mainly used for agarose gel electrophoresis of DNA. It has strong buffering capacity and is suitable for long time electrophoresis, with high-resolution, suitable for fragments smaller than 1kb. The boric acid component in the TBE buffer affects the efficiency of DNA recovery and subsequent enzymatic reactions. For agarose gel electrophoresis recovery experiments, recommended TAE buffer.	28025
